

Unbundling Faculty Roles In Online Distance Education Programs

Patricia W. Neely, Kaplan University, USA

Jan P. Tucker, Kaplan University, USA

ABSTRACT

Many colleges and universities are expanding their current online offerings and creating new programs to address growing enrollment. Institutions often utilize online education as a method to serve more students while lowering instructional costs. While online education may be more cost effective in some situations, college decision makers need to consider the full range of cost implications associated with these online offerings. The unbundling of faculty roles in online distance education programs is one cost consideration which is often overlooked. As the faculty role has become more distributed, so have the costs associated with providing instruction and instructional support. This paper reviews the hidden costs associated with the unbundling of the faculty role and presents a framework for calculating the true costs of the unbundled faculty role.

Keywords: Faculty roles, unbundling, higher education, online education, faculty costs

INTRODUCTION

 Online distance education programs are growing. Allen and Seaman (2008) reported a 12% increase in students taking at least one online course from 2007 to 2008. When the numbers are in for 2009, the growth is expected to far exceed original estimates. Universities are expanding current online offerings and creating new programs to address growing enrollment. At the same time online enrollments are increasing, most colleges and universities are also facing unprecedented pressures to cut costs. State funding for higher education is being cut dramatically and university endowments have decreased in value (Stratford, 2009). In response to the growing pressures to reduce costs, many colleges have looked to distance education, particularly online education, as the primary method for reaching more students while lowering instructional costs. Studies have shown that while online education may be more cost effective in some situations, college decision makers need to consider the full range of cost implications associated with online education. The unbundling of faculty roles in online distance education programs is one cost consideration which is often overlooked. Interviews were conducted at a major regionally accredited online university to determine the true cost of the development, launch, facilitation and maintenance of a graduate business course. The data, while limited to one graduate course at one university, is presented as a means of opening the discussion of the true cost of unbundling faculty roles in online education.

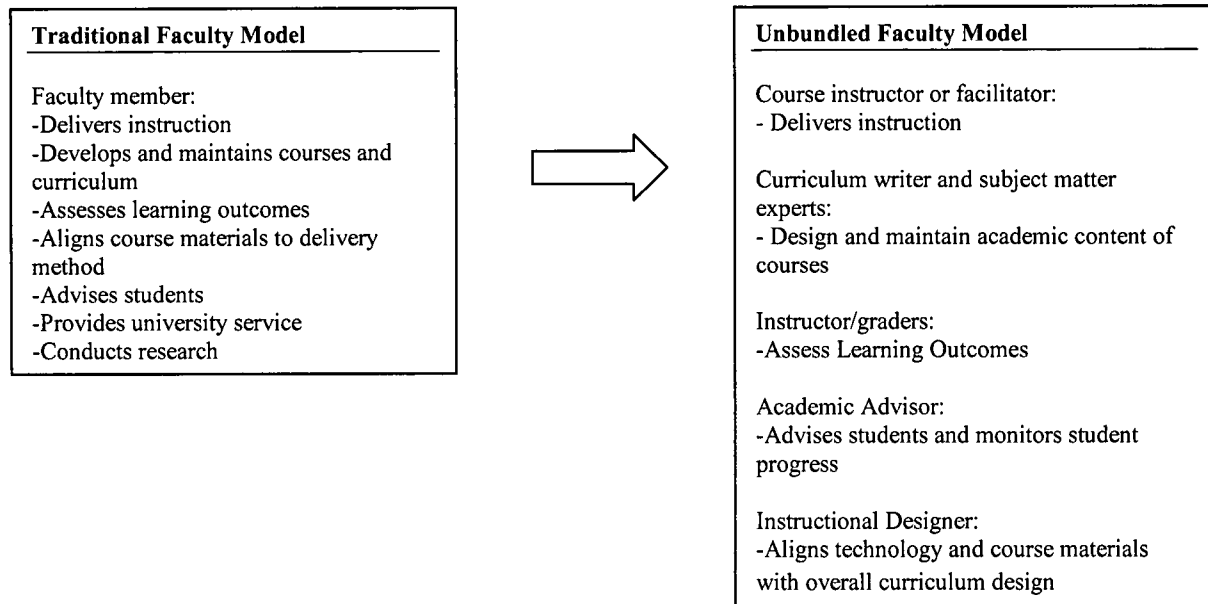

UNBUNDLING OF FACULTY ROLES

The Unbundling Concept

The unbundling of faculty roles begins with determining the core faculty responsibilities associated with the institution. For example, Franklin University has identified three principle faculty functions including leadership, instruction, and curriculum quality (Hagerott & Ferezan, 2003). The unbundling of these roles allows the university to assess, manage and utilize resources based on each of these functions. It also allows the faculty to focus on their areas of expertise. Faculty members with training in curriculum design are involved in developing courses while those with experience delivering instruction are able to focus on facilitating the course. In a traditional faculty model the faculty is responsible for both the content and delivery along with other functions like supervising graduate students, advising students, conducting research and serving on university committees. In an online classroom, this

would also entail being responsible for technology functions. Unbundling these roles separates and redistributes the instructional from the delivery activities. Figure 1 illustrates the unbundling of a traditional faculty role.

Figure 1: Unbundled Faculty Roles

The concept of unbundling is not new. The problems associated with the bundling of faculty roles for example faculty being responsible for areas in which they were not trained such as advising students, counseling, credentialing, and course development were first introduced in the 1970's (Trout, 1979; Wang, 1975). Most online faculty members today are hired specifically to work with students around the course content in a facilitator's role. The unbundling of the traditional faculty role results in the need for a number of support personnel. Faculty supervisors, trainers, instructional technologists, academic advisors and graders are used to support the faculty member.

The unbundling of faculty roles results in a number of challenges for online colleges and universities. At a time when state budgets are shrinking and pressures to contain costs have risen, the unbundled faculty role makes it increasingly more difficult to calculate the actual costs of instruction for a single course (Neely, 2004). From a management perspective, an increased number of support personnel leads to additional activities involved with hiring, training and supervising individuals in specialized roles.

Cost of Unbundled Faculty Role

In the traditional university structure, the department or college is a cost center and budgets and reports on instructional activities are contained within the department. Department chairs and university administrators who take an accounting or historical approach to costing in higher education are able to attribute actual expenditures to each activity (Rumble, 2001). When costs for instructional activities are included in a department budget, allocating the costs on a per course basis becomes a matter of bookkeeping wherein direct costs are attributed to a single activity or course (Brinkman, 2001).

As the faculty role has become more distributed, the costs associated with providing instruction and instructional support have been dispersed to multiple cost centers across the university. Faculty salaries are tangible and easy to account for in budgets (Palloff & Pratt, 2007). Less tangible and more difficult to identify are supervisory costs, training costs, and other support costs necessary to keep online courses functioning. Examining

multiple budgets to identify and allocate costs to a specific course is a complex undertaking. To properly allocate costs, the activities of all instructional support personnel would need to be recorded and allocated to a specific course. In doing so, the costs from multiple departments would need to be gathered and calculated on a per course basis.

With the unbundled faculty model, new hierarchies are created within the university to support instructional activities. What does it cost to create a new department dedicated to curriculum development, academic advising or instructional technology? Calculating the costs goes beyond allocating an instructional technologist's salary to each course supported. Administrative support, equipment, technology, training, and supervision must also be allocated to course activities to obtain the true instructional costs for an online course.

Recruiting, hiring, and training activities proliferate with the unbundled faculty model. The traditional faculty model tasks the department chair with recruiting, selecting, hiring and training new faculty with support from the human resources department and faculty committees. Hiring multiple individuals in highly specified roles also requires increased support for human resource activities as increased numbers of individuals are hired for these roles and the activities are continuous. Hiring is typically based on the semester system in a traditional faculty model. Many online institutions have multiple terms throughout the year resulting in continuous hiring and training of instructional support positions. Increased administrative support is required for processing the hiring paperwork, payroll, and for monitoring faculty performance.

Multiple supervisors are needed with specialized expertise to monitor and evaluate the performance of individuals in specialty roles. Instruction, training and supervision are ongoing in the unbundled faculty model as multiple part-time instructors are used in various capacities to facilitate learning. The instructional costs per student is a growing concern for higher education institutions as they struggle to contain costs while providing quality education in a technologically rich and competitive environment. It is important that all costs be considered when determining the yearly budget for faculty and calculating the true capital-labor ratio in these institutions.

Developing A Framework for Calculating Unbundled Faculty Costs

A review of each of the unbundled faculty roles identified in Figure 1 reveal that the process for identifying costs must begin by creating a framework for the costing process. The researchers determined that a modified activity based costing approach would be used. According to Horngren and Harrison (2009), activity based costing examines costs that are the building blocks for measuring the costs of services such as an online course. With an activity based costing methodology, individual activities are identified and the resulting costs attributed to an individual, online course at the university.

The process for identifying the costs of the unbundled faculty role began by reviewing each of the unbundled faculty roles identified in Figure 1. The costs for all roles were examined and calculated except for the academic advising role. Over the past thirty years, the academic advising function has been increasing segregated from the role of a faculty member (Hrabowski, 2004). Specialized positions have been created within most colleges and universities to address student advising activities. For the purposes of this study, it was determined that academic advising activities were provided through the same advising centers for both students in traditional courses and students in online courses. Academic advising has been segregated from the faculty instructional role at many universities using a traditional faculty model. The researchers determined that calculating the costs for academic advising would not be undertaken as part of this study since advising was centralized for students in both online and on grounds courses.

The first step in conducting a study of the costs of the unbundled faculty role was to identify a framework for gathering costs. The unbundled roles can be separated into three types of activities. The first activity undertaken with the unbundled faculty role is the design and development of the online course. Rumble (2001) suggests that there is a clear division of labor between the activities associated with course development and the delivery of the course. Delivering the course is a second cost center. Interviews with distance education administrators at the university where this study was undertaken revealed a third center of activity, course maintenance.

Once the cost centers were identified, a second step was taken to identify the individuals and the actions taken by those individuals to support online course design and development, delivery, and maintenance. A course developer, course facilitator, and faculty member charged with course maintenance were interviewed to determine the activities associated with each unbundled faculty role.

Data obtained from the interviews as well as research into costing in distance learning was used to develop the Unbundled Faculty Costs Worksheet provided in Table 1. The worksheet provided a starting point for gathering and calculating the costs of the activities associated with the unbundled faculty role.

Table 1: Unbundled Faculty Costs Worksheet

Course Development	
Curriculum Developer (Curriculum Writer) \$2800 divided by 20 deliveries of the course	\$ 140
Faculty Co-Writer \$3000 stipend divided by 20 deliveries of the course	\$ 150
Instructional Designer Costs 80 hours multiplied by \$26 per hour (\$2,080) divided by 20 deliveries of the course	\$ 104
Curriculum Supervisor/Department Chair 12 hours multiplied by \$45 per hour divided by 20 deliveries of the course	\$ 27
Total Course Development Support per each delivery of the course	\$ 431
Course Instruction	
Instructor/Facilitator Per course costs for a course instructor	\$2,600
Graders No additional graders used	\$0
Department Chair/Faculty Mentor Supervision 7 hours per course per term multiplied by \$45 per hour	\$315
Total Course Instruction per each delivery of the course	\$2915
Course Maintenance (each term course is delivered)	
Estimated number of hours spent on course maintenance multiplied by hourly rate Course lead/supervisor: 3 hours @ \$38 per hour = \$148 Instructional Technologist: 7 hours @ \$26 per hour \$182	\$ 330
Total Course Maintenance	\$ 330
Total Costs of Unbundled Faculty Support for One Course	\$3,676

Calculating Costs of the Unbundled Faculty Role

Online universities seem to follow three major models for curriculum development. A number of universities have developed departments devoted to curriculum development. Subject matter experts and curriculum developers with expertise in course design are hired in full time positions to develop courses (Knowles & Kalata, 2007). Many universities follow the traditional model of paying a stipend to current faculty for course development

while some universities use part-time curriculum developers to create courses. Other universities use some type of blended model using current faculty and outside experts to develop courses. In this study, the university that provided costing data used a blended method which paired a current faculty member with an external curriculum writer. The faculty member created learning objectives, identified learning materials including journal articles and textbooks, and identified the assessment methodology. The external curriculum writer developed the course assignments, discussion threads, and the scoring rubrics for assignments.

The role of an instructional designer can vary depending on the university (Tantivivat & Allen, 2004). Some universities do not provide instructional design assistance to course developers. At other universities, the instructional designer assists with each step of course development. The university participating in this study provided instructional designer support to assist the faculty member with loading the course into the learning management system used by the university. The instructional designer ensured that the course provided ease of interaction and clarity to the student and made certain that there were no biases in the way the subject matter was presented.

During the course design process, a department chair or lead faculty member often provides assistance to the course designers. The individual in this role makes sure that the course meets university standards, ensures that the course is developed according to project deadlines, and reviews the course to ensure that it is a quality course. In this study, a full-time faculty member provided support and supervision for the development of the course. The faculty member estimated the number of hours dedicated to supporting the course in this study.

Calculating the costs for individuals filling the unbundled faculty role required several different approaches to costing. The costs for individuals who worked for the university on a full time basis were calculated by dividing the total amount of salary plus benefits by the number of hours in the yearly contract to arrive at a per hour cost. The per hour cost was then multiplied by the number of hours that the individual identified as spending in support of the course. Some individuals participating in the study were paid a flat fee for their contributions. The flat fees were easily allocated to the course activities.

RESEARCH FINDINGS

Our study revealed that there are significant per course costs that are often under accounted for in university budgets as a result of the unbundled faculty model. The unaccounted for costs in the course design phase include leadership and support provided by lead faculty and department chairs in coordinating the design, development, and implementation of new courses. Far easier to identify and quantify are the costs incurred during the instructional phase. Faculty salaries were clearly identified based on the courses assignment. The missing costs in the instruction phase were activities around faculty supervision and training. Course maintenance activities were also difficult to identify and often overlooked in calculating unbundled faculty costs.

Most university budgets consider course development costs as sunk costs and do not allocate the costs to each delivery of the course. The costs of department chair support and instructional designer support are also rarely allocated at the course level. Course development costs for the course studied were \$431 per course delivered. These costs included the work of a curriculum writer, faculty lead, instructional designer and a department chair. These costs may not be considered significant on a per course basis, but when calculated across a number of courses can represent a significant investment in financial resources for a university. With the traditional faculty model, a faculty member would be tasked with developing a new course. The faculty member may or may not receive additional compensation for course development work depending on institutional policies.

The costs for course instruction are the most recognized costs in the unbundled faculty role. Often, course costs in budgets are limited to the cost of course instruction. Again, the costs of providing supervision and training to adjunct instructors are either not reported or underreported when considering the costs of delivering an online course. The adjunct faculty member's salary at the institution studied was higher than average adjunct salary, but significantly less than the cost of a full time faculty member.

For this study, data was gathered on the per class compensation for an online graduate business course. Compensation data was gathered on faculty members who had earned a terminal degree in their field (PhD, EdD, JD or DBA) and had three years teaching experience. The number of weeks per class ranged from six to ten weeks and the per class compensation ranged from a low of \$1800 per class to a high of \$4,000 per class with the per class average hovering around \$2200 per class. The course instructors in the specific graduate course included in this study were paid \$2600 to facilitate the class for six weeks.

Course maintenance costs were calculated as \$330 based on interview data from the department chair and an instructional technologist. Course maintenance costs are the least identifiable costs in the unbundled faculty role. Course maintenance may be as simple as updating a web link in a course or as complex as revising the assignments. Course maintenance is ongoing and is not reflected in budgets except when major course revisions are scheduled.

After calculating the cost of unbundled faculty support for one course, the researchers examined how the cost of support compared to the costs of support for one class with a traditional faculty role. The National Center for Education Statistics reported that the average salary for an assistant professor was \$55,300 (Knapp, 2009). Fringe benefits varied as a percentage of salary dependent upon the type of institution. For the purposes of this study, fringe benefits were estimated at 30 percent of salary (Employee Benefits Research Institute, 2009). Total compensation for an instructional faculty member was calculated at \$71,890 for the purposes of this study. The National Center for Education Statistics also reports that instructional faculty, on average, support eight courses during the academic year (Knapp, 2007). Based on data from the National Center for Education Statistics, the faculty member's total compensation was approximated at \$8,986 for a single course.

Our study revealed a cost of \$3,676 for the instructional support provided to a single course with the unbundled faculty model. At first glance, the unbundled faculty role seems significantly less expensive than the cost of a traditional faculty member's course support at \$8,986 per course. The investment on a per course basis may be skewed in favor of the unbundled faculty role due to limitations in calculating the number of hours that a faculty member devotes to activities outside of instruction, such as university service. Also, it is difficult to assign the amount of time actually devoted to course design and maintenance unless instructional support personnel are asked to keep a time log of activities by course. For the purposes of this study, time spent on administrative and university service activities by faculty was ignored.

SUMMARY AND CONCLUSION

This study suggests that it is difficult to identify and assign costs for instructional activities in higher education, particularly when comparing the traditional faculty model with the unbundled faculty model. Interviews with university administrators indicate that there is an understanding that hidden costs are incurred, but ferreting out the information is difficult given the structure of budgeting and recording costs in higher education.

Completion of this study indicates a need for further research in several areas. The costing worksheet that was designed as part of this study needs to be further developed so that university administrators can easily identify costs with the unbundled faculty model. Further research needs to be undertaken to identify the costs associated with creating new departments within the university to support instruction. Questions around how much it costs a university to hire, train and supervise instructors remain unanswered.

In conclusion, there is much work to be done in developing costing models for the unbundled faculty model. This study only minimally addresses the hidden costs of the unbundled faculty role. Future studies examining these costs would need to include real time record keeping of hours dedicated to course development, delivery and maintenance for not only the instructor, but also, online coordinators, faculty schedulers, instructional design coordinators, course evaluators and quality assurance personnel. As online courses continue to proliferate and scrutiny of higher education costs increases, university administrators need to identify the cost impact of the unbundled faculty role.
